

4-WAY LINKED DIVERTER VALVES

Advantages:

- Improved flow
- Self compensating seal for long life cycle
- Fewer components
- Simplified plumbing
- Valves linked to inline actuator for simultaneous flow diversion regardless of A/B viscosities
- Compact, lower profile

Exact is offering this superior 4-Way Linked Diverting Valve package on its Double Acting Meter/mix Systems, as well as a retrofit package for current users of Exact dispensing systems. Changeover can be accomplished with basic tools in under one hour.

The self compensating seal automatically adjusts for normal wear and maintains positive seal pressure at all times, ensuring optimal performance over a long life cycle.

The valve package consists of (2) 4-way valves, the actuator, mounting bracketry, fluid tubing and miscellaneous support items used in configuring the package on your machine. The valves may also be retrofitted to other double acting systems.
